## Exercise 4

# Assignment Project Exam Help

- Capitalise all characters in the input file.
- Sum all the numbers in the input file.
- Implement a guessing game AI.

## State & IO

# Assignment Project Exam Help

Week 5 covered State and IO and you've had a few weeks to work with them.  
<https://powcoder.com>  
Do you have any questions?

## Functors, Applicatives, Monads

# Assignment Project Exam Help

- Consider *higher-kinded* types of kind  $* \rightarrow * \rightarrow *$  that *contain* or *produce* their argument type.
- *Functor* lets us use a pure function to map between the higher-kinded type applied to different concrete types.
- *Applicative* lets us apply a  $n$ -ary function in the context of the higher-kinded type.
- *Monad* lets us *sequentially/compose* functions that return values in the higher-kinded type.

## Functors

# Assignment Project Exam Help

```
class Functor f where
```

```
  fmap :: (a -> b) -> f a -> f b
```

The functor type class must obey two laws

### Functor Laws

① `fmap id == id`

② `fmap f . fmap g == fmap (f . g)`

Add WeChat powcoder

<https://powcoder.com>

## Applicatives

**Assignment Project Exam Help**

```
class Functor f => Applicative f where
  pure :: a -> f a
  (<*>) :: f (a -> b) -> f a -> f b
```

The functor type class must obey four additional laws:

### Applicative Laws

- ❶ `pure id <*> v = v` (Identity)
- ❷ `pure f <*> pure x = pure (f x)` (Homomorphism)
- ❸ `u <*> pure y = pure ($ y) <*> u` (Interchange)
- ❹ `pure (.) <*> u <*> v <*> w = u <*> (v <*> w)` (Composition)

**Add WeChat powcoder**

<https://powcoder.com>

## Alternative Applicative

It is possible to express Applicative equivalently as:

```
class Functor f => App f where
  pure  :: a -> f a
  tuple :: f a -> f b -> f (a, b)
```

<https://powcoder.com>

### Example (Alternative Applicative)

- ① Using tuple, fmap and pure, let's implement <\*>.
- ② And, using <\*>, fmap and pure, let's implement tuple.

done in Haskell.

**Proof exercise:** Prove that tuple obeys the applicative laws.

## Monads

```
class Applicative m => Monad m where
  (>>=) :: m a -> (a -> m b) -> m b
```

We can define a composition operator with ( $\gg=$ ):

```
(<=<) :: (b -> m c) -> (a -> m b) -> (a -> m c)
(f <=< g) x = g x >>= f
```

The monad type class must obey three additional laws:

### Monad Laws

- ①  $f \leq\leq (g \leq\leq x) == (f \leq\leq g) \leq\leq x$  (associativity)
- ②  $\text{pure} \leq\leq f == f$  (left identity)
- ③  $f \leq\leq \text{pure} == f$  (right identity)

<https://powcoder.com>

## Alternative Monad

# Assignment Project Exam Help

It is possible to express Monad equivalently as:

```
class Applicative m => Mon m where
```

```
  join :: m (m a) -> m a
```

<https://powcoder.com>

### Example (Alternative Monad)

❶ Using join and fmap, let's implement `>>=`.

❷ And, using `>>=` let's implement join.

done in Haskell.

## Tree Example

Assignment Project Exam Help

```
data Tree a
  = Leaf
  | Node a (Tree a) (Tree a)
  deriving (Show)
```

<https://powcoder.com>

### Example (Tree Example)

Show that Tree is an Applicative instance.

done in Haskell.

Add WeChat powcoder

Note that Tree is not a Monad instance.

## Formulas Example

```
data Formula v = Var v
               | And (Formula v) (Formula v)
               | Or  (Formula v) (Formula v)
               | Not (Formula v)
               | Constant Bool
  deriving (Eq, Show)
```

### Example (Formulas Example)

Show that Formula is a Monad instance.

done in Haskell.

## Homework

# Assignment Project Exam Help

- ① Week 5's quiz is due on Friday. Make sure you submit your answers.
- ② The fifth programming exercise is due by the start of my next lecture (in 7 days).
- ③ This week's quiz is also up, it's due Friday week (in 9 days).

## Consultations

# Assignment Project Exam Help

- Consultations will be made on request. Ask on piazza or email `cs3141@cse.unsw.edu.au`.
- If there is a consultation it will be announced on Piazza with a link a room number for Hopper.
- Will be in the Thursday lecture slot, 9am to 11am on Blackboard Collaborate.
- Make sure to join the queue on Hopper. Be ready to share your screen with REPL (`ghci` or `stack repl`) and editor set up.
